

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

Lanius ludovicianus migrans.—On September 19, 1901, at Yarmouthport on Cape Cod I observed a single bird of this species, which from its wariness I was unable to secure. In the house where I boarded there was another specimen of the Migrant Shrike, taken near Lowell a number of autumns ago. These two records make the tenth and eleventh for the State.

Hylocichla fuscescens fuliginosa.—In this same house I discovered a specimen of the Newfoundland Thrush, taken also near Lowell, a number of autumns ago. This is the second record for the State.—REGINALD HEBER HOWE, Jr., *Longwood, Mass.*

Necessary Generic Changes in Nomenclature.—*Helotarsus* Smith (S. African Quart. Journ., I, No. II, Jan.-Apr., 1830, 110), the commonly accepted generic name for the *Bateleur*, is slightly antedated by *Terathopius*, of Lesson (Traité, livr. i, Feb., 1830), whose name should be used.

Polyboroides Smith (S. Afr. Journ., I, Apr. 1830, 106), is a similar case, and should give way to *Gymnogenys* Lesson (Traité, livr. i, Feb. 1830, 64).

Cyphorhinus Cabanis (Archiv f. Naturgesch. X, i, 1844, 282), for a genus of Wrens, is preoccupied by *Cyphorhina* Lesson (Écho du monde savant, sér. 2, VII, June 15, 1843, 1068—type, *Podargus papuensis* (Q. & G.). *Leucolepia* Reichenbach should supersede *Cyphorhinus*.

Perissornis Oberholser (Proc. Acad. Nat. Sci. Phil., 1899, 216), a new name for *Dilophus* Vieillot, preoccupied, was long ago called *Creatophora* by Lesson (Compl. Œuvres Buffon, ed. Lévéque, XX, 1847, 308), whose name should be accepted for *Gracula carunculata* Gmelin.

Lessonia Swainson (Fauna Boreali-Americanæ, II, Feb. 1832, 490), should be used in place of *Centrites*, which was proposed by Cabanis (Archiv f. Naturgesch., 1847, I, 256), on the ground that *Lessonia* was preoccupied in botany.

Dendrophila Swainson (Classif. Birds, II, July, 1837, 318), is preoccupied by *Dendrophila* Hodgson (Madras Journ., V, No. 15, April, 1837, 432). *Calisitta* Reichenbach is available for the small group of Nut-hatches to which Swainson applied the above name.

Docimastes Gould (Monogr. Trochil., IV, 1849, pl. 233), is antedated by *Ensifera* Lesson (Écho du monde savant, sér. 2, VIII, Oct. 19, 1843, 734). The Sword-billed Hummingbird should therefore be known as *Ensifera ensifera*.

Metallura Gould (P. Z. S., 1847, 94), was earlier named *Laticauda* by Lesson (Écho du monde savant, sér. 2, VIII, Oct. 22, 1843, 758—type, *Trochilus tyrianthinus* Loddiges), whose name should be used.—CHAS. W. RICHMOND, *Washington, D. C.*

Northern Visitants to Oregon.—Mr. B. J. Bretherton has recently sent me some birds from Lincoln County, Oregon, three of which are of particular interest.
